

Paper size, margins, figures & typefaces — to scale across publishers

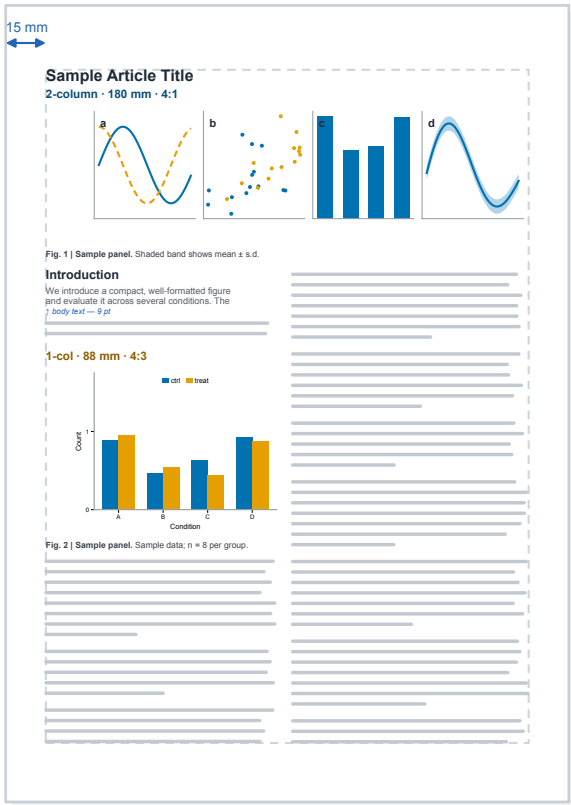

Top row A4, bottom row US Letter. Real full- and part-width figures (a different aspect ratio per publisher), axis labels kept inside the column. Body text is greeked — only the first paragraph is real; each figure caption follows that journal's house style.

Type shown to scale — article title 16 pt · body 9 pt · caption 8 pt · axis label 7 pt

Three typefaces — same text & formula

	Arial	Times New Roman	Computer Modern
Large · 12 pt	Sample 0123	Sample 0123	Sample 0123
Regular · 9 pt	Sample 0123	Sample 0123	Sample 0123
Small · 7 pt	Sample 0123	Sample 0123	Sample 0123
italic	<i>Sample 0123</i>	<i>Sample 0123</i>	<i>Sample 0123</i>
bold	Sample 0123	Sample 0123	Sample 0123
math	$E = mc^2$	$E = mc^2$	$E = mc^2$

Nature

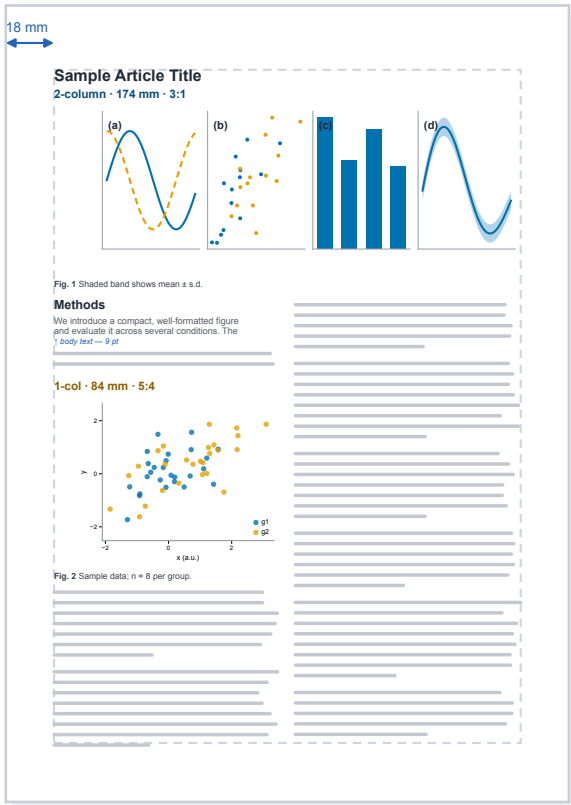

A4 · 210 × 297 mm
2-column · gutter 4 mm

Elsevier

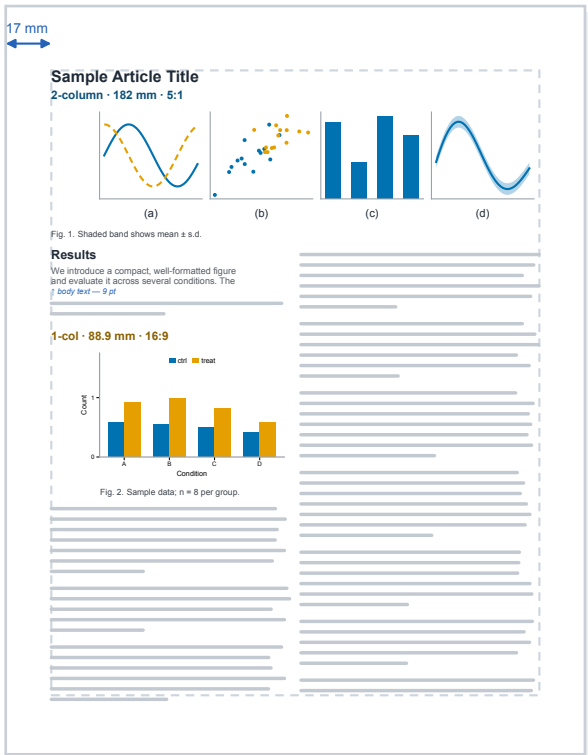

A4 · 210 × 297 mm
2-column · gutter 10 mm

Springer

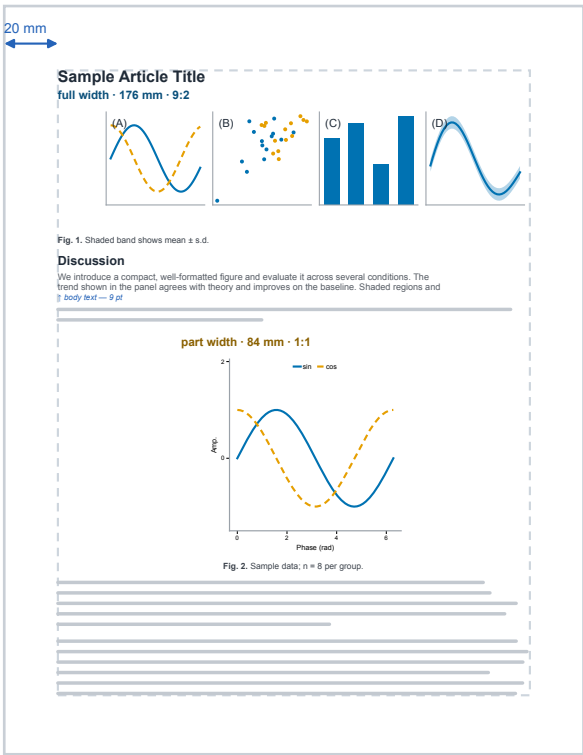

A4 · 210 × 297 mm
2-column · gutter 6 mm

IEEE

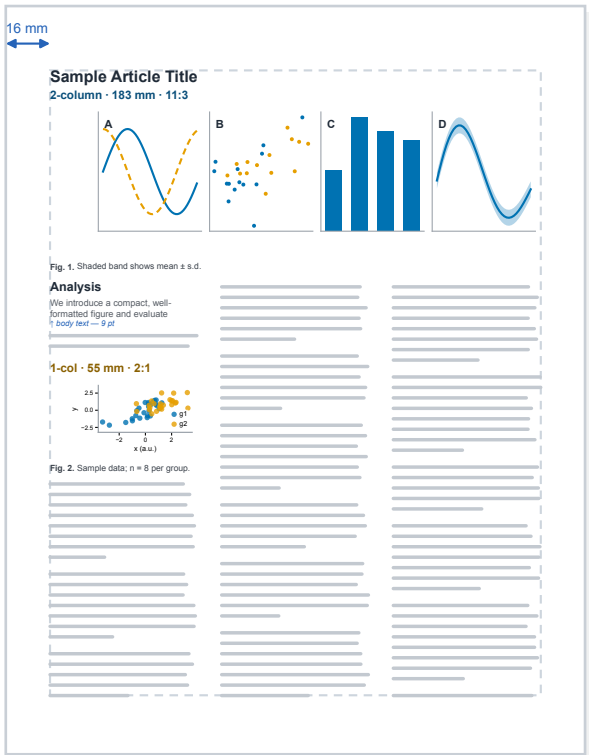

Letter · 216 × 279 mm
2-column · gutter 4 mm

Wiley

Letter · 216 × 279 mm
single-column text

Science (AAAS)

Letter · 216 × 279 mm
3-column · gutter 9 mm

— part/single-column figure

— full-width figure

-- text area (margins)

— greeked body text

Type sizes are shown roughly to scale (title 16 pt down to axis label 7 pt); column widths verified for Nature / Elsevier / IEEE, others representative. Figures use a different aspect ratio per publisher (w : h on each panel) and panel labels (a, (a), (A), A ...) in each journal's house style. Always confirm with the target journal.
