

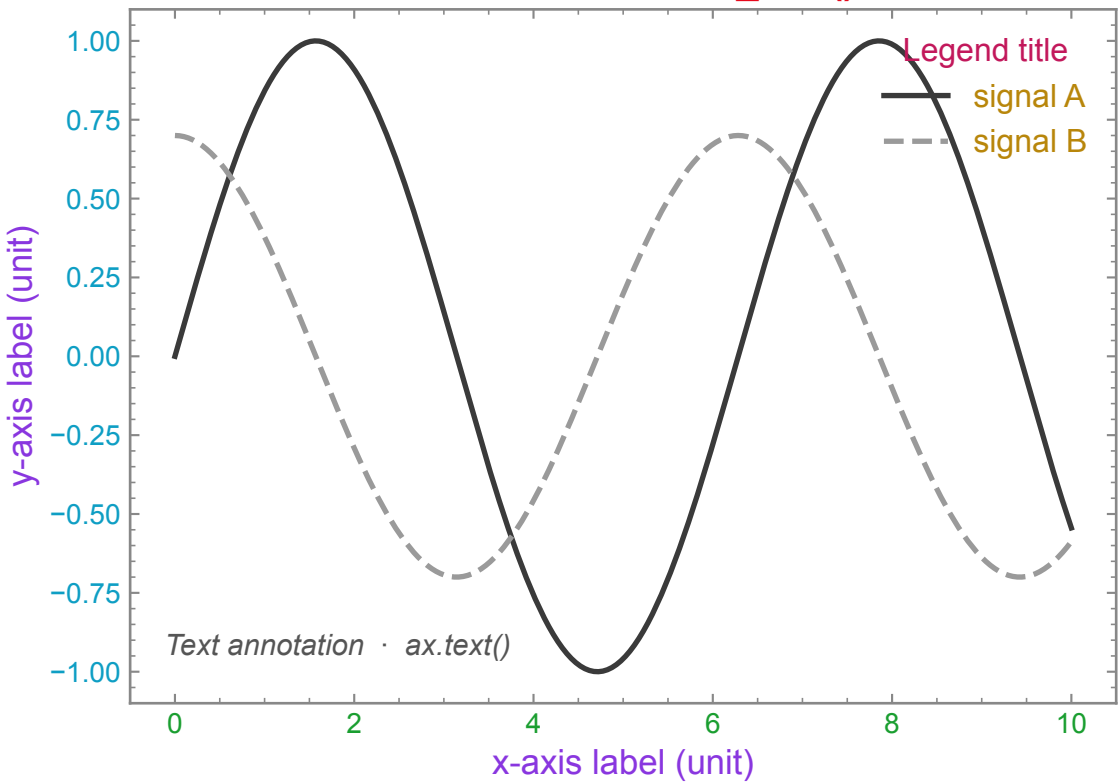

Figure title · fig.suptitle()

Axes title · ax.set_title()

Which rcParam sets each text size

- figure.titlesize**
19 pt → figure title — fig.suptitle()
 - axes.titlesize**
15 pt → axes title — ax.set_title()
 - axes.labelsize**
13 pt → x- and y-axis labels (both)
 - xtick.labelsize**
10.5 pt → x tick labels
 - ytick.labelsize**
10.5 pt → y tick labels
 - legend.fontsize**
12 pt → legend entries
 - legend.title_fontsize**
12 pt → legend title
 - font.size**
11 pt → other text; base others fall back to
- Typeface of every element: font.family / font.sans-serif.
Weights: axes.titleweight · axes.labelweight · figure.titleweight.
Also: figure.labelsize → fig.supxlabel()/supylabel().

Line width · lines.linewidth

Line style · linestyle (ls)

Marker size · lines.markersize

0.5 pt		solid '-'		ms = 3	
0.75 pt				ms = 5	
1 pt		dashed '--'		ms = 7	
1.5 pt		dotted '.'		ms = 9	
2 pt				ms = 12	
3 pt		dash-dot '-.'			

Line width / style / marker size are rarely journal-mandated — choose for legibility at final size (thicker / larger for talks); vary style and shape so it reads in grayscale.

Typeface · font.family / font.sans-serif — sans vs serif vs the LaTeX face

	Arial (sans-serif)	Times New Roman (serif)	Computer Modern (LaTeX)
Large · 12 pt	Sample 0123	Sample 0123	Sample 0123
Regular · 9 pt	Sample 0123	Sample 0123	Sample 0123
Small · 7 pt	Sample 0123	Sample 0123	Sample 0123
italic	Sample 0123	Sample 0123	Sample 0123
bold	Sample 0123	Sample 0123	Sample 0123
